

(a) new endpoint in, old one out

$\alpha = 3, \beta = 3, D = 4$

overlap $2 \rightarrow 3$

$\varepsilon = 1$

$$|\beta - D + 2| \leq \alpha < \beta + D$$

(b) both endpoints inside

$\alpha = 7, \beta = 3, D = 2$

overlap $4 \rightarrow 4$

$\varepsilon = 0$

$$\beta + D \leq \alpha$$

(c) both endpoints outside

$\alpha = 1, \beta = 1, D = 6$

overlap $0 \rightarrow 0$

$\varepsilon = 0$

$$\alpha < |\beta - D + 2|$$

β and D fixed:

$\bullet I_\alpha$

$\bullet I_\beta - D$

$\bullet I_\beta - (D - 2)$

filled markers lie in the window $|x| \leq \alpha$; open markers of the same colour lie outside it
