

(a) new endpoint in, old out
 $\alpha = 3, \beta = 3, D = 4$
 coincidences $2 \rightarrow 3$

(b) both endpoints inside
 $\alpha = 7, \beta = 3, D = 2$
 coincidences $4 \rightarrow 4$

(c) both endpoints outside
 $\alpha = 1, \beta = 1, D = 6$
 coincidences $0 \rightarrow 0$

β and D fixed:

$\bullet I_\alpha$ $\bullet I_\beta - D$ $\bullet I_\beta - (D - 2)$
 open markers lie outside the window $|x| \leq \alpha$; dashed links are the coincidences counted
